

Asset & Fleet Monitoring

GLSi

Astrata's GLSi is the company's latest fleet monitoring and reporting system for asset and fleet monitoring. It is a Web 2.0 portal with a seamless rich Internet experience and high interactivity. It approaches the performance of a non-web based client application with widgets, animations, pop ups and reveal-discovery to ensure an intuitive user experience. GLSi together with GLS forms a complete end-to-end solution for asset tracking and management.

Features:

- Secure web log on
- Widgets based browser application
- Operator managed tabs
- Uses Google Maps
- Multi-tab page layout for efficient organisation of the information

- **follow.them™** – operator specified vehicles are made the central focus of the map. The display will pan to the new location of the vehicle if it has moved outside of the display window. The map zoom level will be optimised to display all vehicles if there are two or more vehicles to follow. There are no limits to the number of vehicles the user can follow.
- Drag and drop placement of widgets
- Session state is preserved. The user will come back to the same screen layout when returning as an authenticated user
- Highly contextual visual information. Icons will adapt to status changes and alerts that enhances the use experience

The widgets available to the user are:

- **Updates:** Scrolling display of all or filtered updates on user selected vehicles in text and colour-coded visual cues
- **Monitor:** Map view of all user selected vehicles with *follow.them*TM feature
- **GIS:** Geofence creation and management widget
- **Command:** Send commands to vehicles for latest positions, enable or disabling functions
- **Vehicle:** Display information of a specific vehicle in one window
- **Replay:** Recreates the journey of a vehicle for a specific period of time
- **Report:** Extract and format information for reporting in print or to be exported in electronic media
- **Reverse GeoCoding:** Determine exact addresses when running reports based on street addresses or POIs. (Not Available for all Countries)

This base collection of widgets can be supplemented with customised widgets to suit the needs of the customer's organisation.

Astrata is focused on advanced location-based IT services and solutions (telematics) that combine GPS positioning, wireless communications (satellite or terrestrial) and geographical information technology, which together enable businesses and governments to monitor, trace as well as control the movement and status of machinery, vehicles, personnel or other assets.

Astrata has designed, developed, manufactured and currently supports ten generations of telematics systems with units deployed worldwide.

Astrata has offices throughout the world including the Middle East, United States, Europe, New Zealand, Australia and Asia.
